

ACTION PLAN

SAVING ANIMALS FROM EXTINCTION
AFRICAN VULTURES

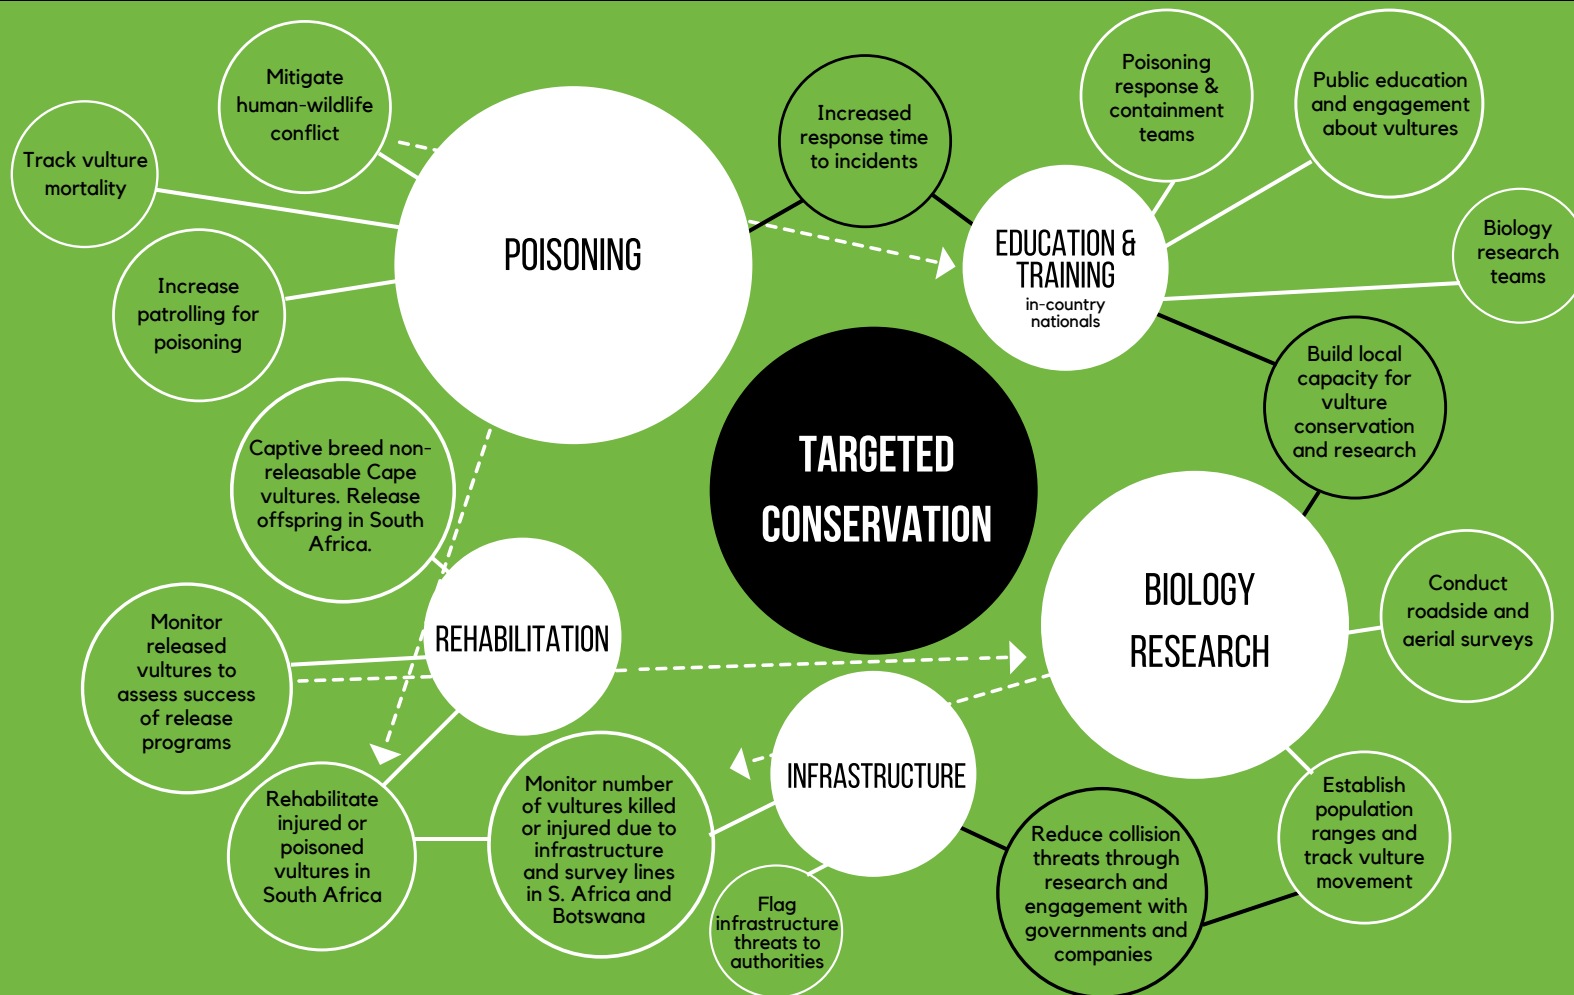

African vultures play a key role in disease control and waste removal that is critical for the stability of the ecosystems in which they live. In addition to their ecosystem service role, the threats to their survival and their conservation needs also overlap heavily with a number of other key species, such as African elephants and lions, and they are thus an ideal species to focus on for wide-reaching, landscape-level conservation efforts. The plight of African vultures has only recently been recognized, but rapid declines have been noted for almost all species throughout large portions of the African continent. This has led to the up-listing of nearly all the African vulture species on the IUCN Red List with initial up-listing in 2012 and further up-listing in 2015. Denver Zoo, North Carolina Zoo, and San Diego Zoo Global proposed African Vultures as a SAFE program in February 2017, which was accepted in August 2017. This action plan was completed in February 2018.
